KNOW YOUR STORM DRAIN

Where Does Stormwater Go?

1 Rain hits hard surfaces.
Water runs off roofs, driveways, sidewalks, and streets.

2 Runoff enters the drainage system.
Storm drains and other infrastructure collect and convey that water.

3 The water keeps moving.
It travels through a network of pipes, ditches, and other stormwater infrastructure.

4 It eventually reaches local waterways.
Runoff may flow to streams, rivers, lakes, wetlands, or coastal waters—without treatment.

WHAT HAPPENS ON YOUR STREET CAN AFFECT WATER QUALITY DOWNSTREAM.

Keep oil, chemicals, and paint out of the street.

Put trash in the trash, not in storm drains.

Keep grass clippings and leaves out of gutters and drain openings.

Pick up pet waste before rainfall.

Wash vehicles at a commercial car wash.

Do your part to keep our communities and waterways clean and healthy.

ONLY RAIN DOWN THE DRAIN.
